

fun with NUMBERS

Where would you be located ... if

- 1 you're somewhere, on the planet, and freely able to go anywhere you'd like to ...
- 2 you decide to travel, and your first choice is to proceed one mile to your south ...
- 3 at this point you decide to travel another mile, this time you go directly west...
- 4 you're further along on the journey and decide to travel one mile to your north ...
- 5 after having traveled one mile to the south, another mile to the west and finally another mile to the north you've relocated yourself back to where you started ...

do you know where you are?
