

fun with NUMBERS

Basic arithmetic – the “old fashioned way” and the “new way” ... we’re going to use this again –

Lesson #1:

“old fashioned way”

$$\begin{array}{r} 12 \\ 345 \\ 6,789 \\ \hline 7,146 \end{array}$$

“the new way”

16 ■ units
130 ■ tens
1,000 ■ hundreds
6,000 ■ thousands

$$\begin{array}{r} 16 \\ 130 \\ 1,000 \\ 6,000 \\ \hline 7,146 \end{array}$$

It's easier to add when you have zero instead of the several digits to confuse you ...

Lesson #2:

multiplying by nine – using your hands, and each finger numbered from 1-10 – it's easy ...

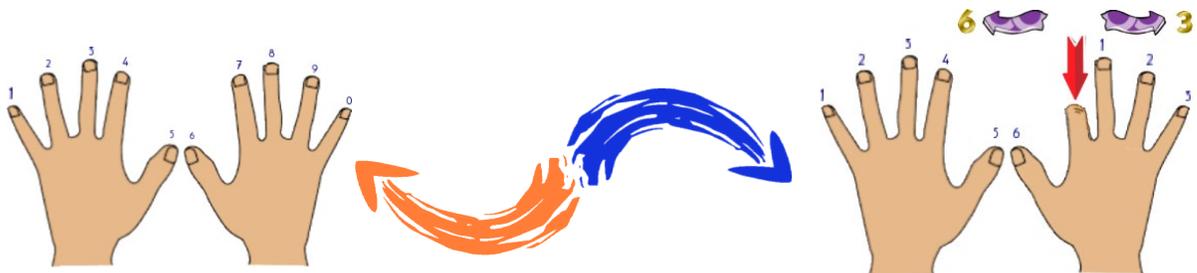

Lesson #3:

9×4 – that's so easy, anyone can do that blindfolded – it's “36” ...

Lesson #4:

9×7 – it's still simple, again anyone can do that blindfolded – what about ... 9×47

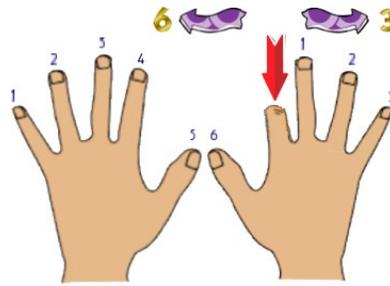

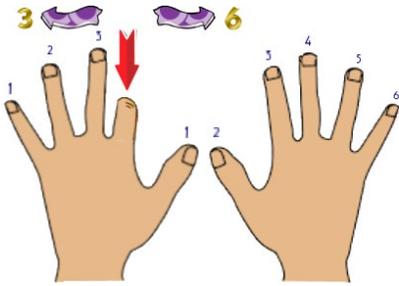

- that's harder - maybe it's time for pencil & paper ... or maybe not ... let's work together on this -

9 x 4 was "36"

... 9 x 7 was "63"

and ...

Lesson #5:

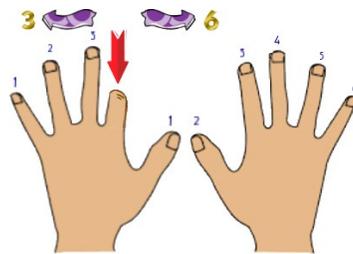

$$\begin{array}{r} 40 \\ + 7 \\ \hline 47 \end{array}$$

so if ...

then, we also multiply this ... by ten

Lesson #6:

$$4 \times 10 = 40$$

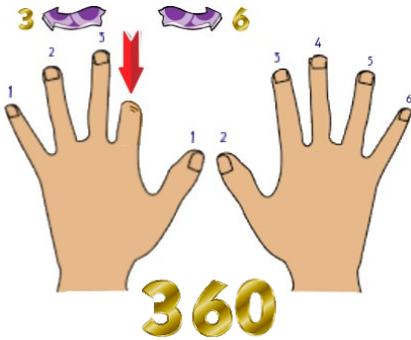

$$\times 10 = 360$$

so this ...

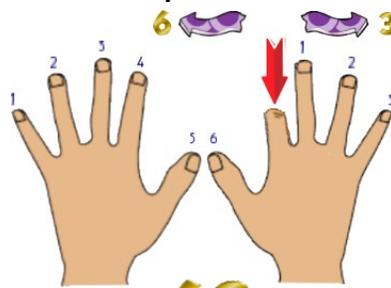

plus this ...

Lesson #7:

$$360$$

+

$$63$$

$$= 423$$
